PROFILE

I don't believe in firefighting. Nine years ago I started building systems that make fires nearly impossible to start. A startup that scaled from Series B to **\$6B valuation with zero production UI defects across three years** and millions of users. Government platforms serving **13M Pennsylvania residents** and **4.6M Louisiana residents** in active emergency. AI products that turn **16 domain experts' tribal knowledge into 67+ auditable decision rules** on AWS Bedrock. Now running **Rune Lab**, codifying the craft for other teams. The context changes. The principle doesn't.

TECHNICAL SKILLS

Languages & frameworks: TypeScript, JavaScript, React, React Native, Next.js, Node.js, Python, GraphQL, REST APIs

AI & ML: AWS Bedrock (Claude), OpenAI API, Claude Code, prompt engineering, decision-rule extraction, knowledge architecture

Frontend systems: Tailwind CSS, SASS, CSS Modules, Storybook, Chromatic, Atomic Design, Figma

Quality & testing: Vitest, Jest, React Testing Library, visual regression, WCAG 2.1 AA/AAA, Lighthouse

Infrastructure & DevOps: AWS, Docker, Kubernetes, Vercel, GitHub Actions, CI/CD, Vite, Webpack

Data & observability: PostgreSQL, Sentry, GraphQL caching, A/B testing, SEO architecture, Stripe

Leadership & strategy: Team scaling (1 to 12), design system architecture, technical roadmap ownership, cross-functional facilitation, executive stakeholder management, RACI ownership, scope defense, ROI modeling

EXPERIENCE

Founder & Principal — Rune Lab LLC

April 2026 – Present

Remote · Harrisburg, PA · [runelab.co](#) · Technology consulting and AI infrastructure

- Founded a technology consulting practice on a single principle: **Codify the craft**. Operating across the full sales-to-delivery pipeline including scoping, technical due diligence, fixed-scope engagements, and a vetted contractor bench across design systems, AI/automation, and systems-thinking design.
- Codified nine years of architecture work into a repeatable methodology: decision-rule extraction, design system standup, AI workflow integration, and accessibility-first frontend platforms. Methodology designed so the founder is removable from delivery.
- Building **RuneGate**, accessibility compliance infrastructure embedded at the component and CI layer. Roadmap includes agency-installs-then-self-serve transition path from delivery to recurring SaaS revenue.
- Authoring **RuneLore**, a frontend engineering newsletter on systems thinking, AI-enhanced workflows, and production architecture. Debut post hit **117,000 impressions in two days** with a 32% save-to-reaction ratio, signaling reference-quality content rather than disposable engagement.

AI Product Strategist — StealthX

Feb 2026 – April 2026

AI Consultancy · Staff-level and above · 1099 · Remote

- Defined product strategy, technical architecture, and technology direction from zero for an AI-powered enterprise platform. Established the decision boundary between deterministic automation and LLM-powered reasoning. Ran **two concurrent client engagements** with separate executive stakeholder chains.
- Built the organizational knowledge architecture for a consumer research client operating entirely on tribal expertise. Codified knowledge from **16 domain experts into 67+ auditable decision rules across 10 logic gates**. Designed the classification taxonomy, defined escalation paths, and identified 11+ undocumented knowledge gaps with named owners and capture timelines.
- Built the ROI model from quantitative analysis of **13,395 historical records (~3,110 annual operational cycles)** that justified the investment to the CFO. Defined the success metrics framework: scheduling time per study, conflicts caught proactively, coordination touchpoints reduced, percentage of studies scheduled via tool, and recommendation acceptance rate.
- Shipped the **Interactive Decision Logic Explorer**, an AWS Bedrock-powered backend that surfaces AI scheduling decisions in real time through a React frontend. Users see reasoning unfold as they enter data, receive proactive guidance on edge cases, and get warnings on restricted actions before submission. Saved the client's entire team **20 hours per week per person** on manual coordination.
- Designed and led a cross-functional **8-person pilot program** across three operational roles. Built a decision audit tool that serves executives, engineers, and frontline users from a single interface. Structured the feedback loop from prototype walkthroughs through iteration.
- Owned the RACI, routed scope decisions through the correct approval chain, and managed executive stakeholders across finance, technology, operations, and chief of staff functions. Set the gate decision framework (scale, adjust, or stop) for portfolio-level investment.

Lead Frontend Architect — Fleetio

Nov 2022 – Feb 2026

Remote · Series B to \$6B valuation · Millions of users

- Set the technical direction for Fleetio's frontend platform spanning React, Next.js, TypeScript, and Node.js. Made high-stakes architecture decisions on service boundaries, build systems, caching layers, and infrastructure strategy as the company scaled **from Series B to \$6B valuation**.
- Grew the cross-functional engineering team **from 1 to 12** across frontend, design, and QA. Established engineering culture, code review standards, and incident response processes. Mentored engineers from intern to senior level.
- Built the Figma-to-CI/CD design system: 75+ component React library in Storybook, visual regression via Chromatic on every PR. **Feature implementation time dropped 60%. Zero UI defects reached production** across three years.
- Led full-stack migration from Ruby on Rails to React, Next.js, and TypeScript. Build times dropped **from 28 minutes to 2 minutes**. Deployment cycles compressed from weeks to hours. Managed technical debt strategically throughout.
- Built internal sales enablement tools that took revenue attainment **from 67% to 134% in two quarters**. The sales team hit its annual target at the halfway mark. Bridged product and engineering to translate business goals into sequenced technical roadmaps with honest tradeoffs.
- Drove reliability and security posture: Sentry observability across the full stack, **SEO health from 68% to 92%** with AI-assisted CI validation, **accessibility from 64 to 98** by engineering WCAG into the component layer. Defined quality gates that blocked regressions before production.

- Ships **60% faster** using Claude Code. Evaluates and integrates emerging AI capabilities, distinguishing what's frontier from what's production-ready.

Frontend Architect — Tyler Technologies

Mar 2020 – Nov 2022

Government Contracts · Harrisburg, PA · Public-sector platforms

- Designed and shipped the **Keystone Design System**, adopted across platforms serving **40+ states and 13M Pennsylvania residents**. WCAG AAA built into every component. System design decisions spanned frontend, data, and compliance-critical infrastructure.
- Built the emergency notification system that alerted **4.6M Louisiana residents** to unsafe water conditions during hurricane emergencies. Zero-downtime infrastructure under real pressure with real SLAs.
- Held **98+ accessibility scores** across PA DMV, Treasury, Pa.gov, and the gubernatorial sites for Tom Wolf and Josh Shapiro. Operated self-hosted infrastructure where reliability had public-sector consequences.
- Containerized frontend applications with Docker, deployed via Kubernetes, and configured AWS environments. Integrated SSO authentication for secure state employee and resident access. Improved page performance ~15% while maintaining accessibility floor.
- Mentored engineers across multiple specializations, led cross-functional workshops, and built shared ownership of frontend quality across teams.

SELECTED PROJECTS

Curion AI Scheduler *AWS Bedrock, Claude API, Python*

AI-powered scheduling system automating complex rules-based logic for consumer research facilities. Extracted tribal knowledge from 16 domain experts into an auditable decision engine with full test coverage and a visual interface anyone in the org can audit. Saved the team 20 hours per week per person on manual coordination.

Correlations Calculator correlation-calculator-theta.vercel.app *Next.js 14, TypeScript, Tailwind CSS, Recharts, nuqs*

Rolling Pearson correlation tool with interactive data visualization across stocks, ETFs, and crypto. URL-driven state, lazy-loaded charts, full keyboard nav and ARIA. Clean architecture with ~60 line orchestration layer.

RuneGate *In development · Accessibility compliance infrastructure*

SaaS product embedding accessibility validation at the component and CI layer. Catches violations before they reach production rather than after. Distribution model layers agency-installs-for-clients delivery on top of self-serve subscription.

RuneLore

Frontend engineering newsletter on systems thinking, AI-enhanced workflows, and production architecture. Debut post hit 117,000 impressions in two days with reference-quality save rates from senior engineers and hiring managers.

EDUCATION

Full-Stack Web Development Certification *Bloc.io, San Francisco, CA*

Top 1% of graduating class. React, Node.js/Express, SQL, API development, security, testing, deployment.

VOLUNTEER & MENTORSHIP

Mentor, Tech Ladies *Dec 2024 – Present*

Career coaching for women in tech on progression, interview prep, salary negotiation, and navigating industry challenges.
